Elements vs Business Suite

What more you get with Elements?

EPP features in Elements only

- Rollback and Server Share Protection
- Issues and Security Posture views
- Outbreak control
- System Events Detection
- Endpoint encryption & recovery key management
- Automated tasks
- Patch Management for macOS
- Automatic agent upgrades with early access / piloting option
- Real-time operations from portal

EDR features in Elements only

- EDR Advanced Response features and tools
- Outbreak control with EPP
- EPP and EDR managed from same portal
- Co-Monitoring Service
- MDR Service

PARTNER RESTRICTED

Elements vs Business Suite

What more you get with Elements?

Portal features

- Devices always use latest policies even when outside office network and can update status and reach management when connected to internet
- Flexible Elements API for custom integrations
- Elements Connector for semi-airgapped environments and SIEM/Syslog forwarding
- Send messages to users via Elements agent
- Frequent new improvements weekly
- Support for multi-tenancy
- More accessible support: You can grant portal access to WithSecure Support for more efficient troubleshooting. Portal supports requesting and collecting diagnostics packages from devices directly to WithSecure support

PARTNER RESTRICTED

Elements vs Business Suite

What more you get with Elements?

Integration to other Elements products

- Outbreak Control that leverages EDR data to automatically harden EPP settings and security posture
- Co-Security services: Elevate ,Co-monitoring & MDR
- Agent based authenticated scanning for Elements Vulnerability Management from same agent *(Requires a separate license)*
- Mobile Device protection and management from same portal *(Requires a separate license)*
- Elements Collaboration Protection capabilities from same portal *(Requires a separate license)*
- Elements XM capabilities from same portal *(Requires a separate license)*

Additional services

- Co-monitoring *(Requires a separate license)*
- MDR *(Requires a separate license)*

Other benefits of Elements

Reduce operating costs

Predictable operating costs

- No servers needed for management
- No operating systems licenses needed for management
- No need for installing management consoles
- No backups and no need for highly available architecture: Built-in redundancy
- Cloud scales automatically, no need to monitor or add resources, hardware or other infrastructure

PARTNER RESTRICTED

Other benefits of Elements

Ramp-up productivity and flexibility

Productivity and flexibility

- Quicker development and release cycle of new features and capabilities
- New features and improvements always installed and available for implementation
- No need to upgrade client and management server versions. Always up to date
- All internet connected devices fully monitored and managed 24/7 regardless of location
- No need to manually install security patches and hotfixes
- Flexible integrations via API
- Subscription and usage based pricing models
- Access to management via browser
- Platform benefits from other Elements solutions – All in one portal

PARTNER RESTRICTED

Elements vs Business Suite

What is currently missing from Elements?

Business Suite only features

- Tree like Policy Domain structure with inheritance
- Fully isolated / Air-gapped mode
- Email and Server Security centralized management
- Atlant centralized management
- AD federation and AD structure integration
- Data mining
- Botnet Blocker

Business Suite & EDR

WithSecure Elements EDR for Business Suite

End of Life Announcement: WithSecure Elements EDR for Business Suite

Dear Partner

In line with our End-of-Life policies, we are contacting you to notify that all support for **WithSecure Elements EDR for Business Suite** will end on **December 31st 2024**.

WithSecure Business Suite Partners and Customers who wish to continue using WithSecure Elements EDR are advised to switch over from WithSecure Business Suite to WithSecure Elements, which includes Endpoint Protection, Endpoint Detection and Response, as well as other functionality which does not exist within Business Suite.

Please Note: This End of Life announcement ONLY relates to WithSecure Elements EDR for Business Suite. It does not affect WithSecure Business Suite itself, nor any other version of WithSecure Elements EDR.

If you have any questions related to this change, please contact your WithSecure Sales Representative.

Business Suite with Elements EDR is approaching End Of Life (EOL)

- EOL date is Dec 31st 2024
- Business Suite clients will no longer co-exist with Elements EDR after this date
- Business Suite users who wish to continue with Elements EDR are advised to switch over from Business Suite to Elements
- NOTE: Business Suite itself is not in EOL

MIGRATION PROCESS

PARTNER RESTRICTED

Migration process

High level steps for migration

1. Create / acquire licenses to Elements Portal
2. Review your Policy settings in Policy Manager
3. Export all unique Policy Domain settings to corresponding profile export files
4. Import profiles to Elements Security Center
5. Create Elements installation package in Policy Manager
6. Deploy Elements Agent from Policy Manager
7. Assign correct profiles from Elements Security Center to migrated devices

4. Import profiles to Elements Security Center
5. Create Elements installation package in Policy Manager
6. Deploy Elements Agent from Policy Manager
7. Assign correct profiles from Elements Security Center to migrated devices

PARTNER RESTRICTED

Migration process

Why not start clean?

- Don’t move your legacy rules and settings: Implement better security posture
  - Moving exclusions that are not needed can be risky
  - Clean-up of old obsolete settings
  - Take latest new Elements security features and capabilities into use
  - Harden your security settings and posture
- Get the benefits of Elements EDR already onboarded in new installations and add immediate visibility and respond capability
- Implement immediately all the features like Rollback that are only available in Elements EPP
- Consider onboarding other agent capabilities like Elements Vulnerability Management easily in one go
- This approach requires piloting and testing but migration can be done in phases
